Samueli
School of Engineering

UCLA **Samueli**
School of Engineering

- » Known as the Birthplace of the Internet, UCLA Samueli is also where countless other fields took some of their first steps – from artificial intelligence to reverse osmosis, from mobile communications to human prosthetics.
- » We are problem solvers. We lead multinational aerospace companies, build skyscrapers and found \$18 billion tech ventures. We row in the Olympics, build robots that compete in international soccer matches and win Academy Awards.
- » But what really sets UCLA Samueli apart from other engineering schools is our sense of community – fostered on campus and carried on through alumni relationships over the ensuing decades.
- » Maybe it's the near-constant sunshine we get throughout the year, or the mild climate in general, but people tell us we're a friendly place. Students look out for one another, and faculty build teamwork into the curriculum. We're a community of high achievers, but that achievement is never at the expense of others.
- » That may explain why our alumni like to stay so connected with the school. Whether it's mentoring current students, participating in our Leaders in Technology Speaker Series, sponsoring a student club, or simply attending our Annual Reunion, UCLA Samueli alumni stay close.
- » At UCLA Samueli, we're building a new kind of engineering school. Collaborative. Entrepreneurial. Fearless. With a dedication to excellence and a deeply held conviction that anything is possible.
- » This dynamic, can-do attitude is in the DNA of our university – the #1 public university in the country. We make a difference. We solve the problems of the world. We Engineer Change.

Engineer Change.
